please do not report the images to the
Image Problem Mailbox.**

ABSTRACT

A mini-camera with an adjustable structure mainly includes a camera body, a support and at least one limiting element disposed at a connection between the camera body and the support. The
5 limiting element provides the camera body with enough friction for adjusting the viewing angle of a camera lens relative to the support. A user can step-less adjust the view angle of the camera lens of the camera body, the user doesn't need disassemble the camera body or the support, and further the user cannot damage the connection
10 between the camera body and the support for maintaining the outside beauty of the mini-camera.
